Professional Experience

Zendesk — Software Engineer II – Site Reliability Engineer

May 2025 – Present · Remote

- Built an AI alert triage bot that investigates alerts and suggests next steps: **177** alerts in a one-month pilot, **96%** accurate findings, **54%** faster investigations (approximately **90 hours** saved).
- Resolve **10+** SEV-1 to SEV-4 incidents monthly as an on-call engineer, using incident.io and Datadog.
- Built Claude Code tooling that automates alert and runbook review and onboarding.
- Review deployment PRs and GitHub Actions CI/CD pipelines to keep releases safe.
- Tune Datadog monitors and maintains runbooks to keep alerts accurate and actionable.
- Contributed investigation findings to incident postmortems and root-cause analysis.

Tech: Python, Datadog, incident.io, Bash, Jira, Confluence, Automation, AI, GitHub Actions, AWS, Kubernetes

Kodexa — Python Developer

October 2023 – May 2025 · Hybrid, Manila

- Owned **7+** automated SQL reports (daily, weekly, monthly) and the ETL pipelines behind them.
- Monitored production with Datadog and Betterstack, fixing errors and securing credentials with AWS-managed secrets.
- Contributed to AI/ML model training, evaluation, and optimization, and designed LLM prompts.
- Automated recurring operational tasks and documented scripts and incidents in Notion.

Giant International Software Station Inc. — Software Engineer

October 2022 – October 2023 · Hybrid, Baguio City

- Designed and built web applications and REST APIs from Product Manager requirements.
- Served as interim team point of contact while the lead role was vacant, managing schedules and deadlines.

Lingayen Provincial Capitol — Software Engineer

February 2021 – February 2022 · Onsite, Lingayen, Pangasinan

- Automated unstructured document processing using Google Vision and RPA.
- Built the provincial library website as its first developer.

Projects

Homelab — Self-Hosted Home Server

2026 – Present

- Run a self-hosted Mac Mini server that hosts Docker-based monitoring and automation projects, built using AI-assisted development.
- Built a Starlink monitoring stack with Grafana dashboards to track home internet connection health.
- Built ph-alerts, an automation service that sends Telegram notifications for PAGASA typhoon signals and weekly fuel price changes.

Tech: Docker, Grafana, Telegram Bot API, macOS

F1 Pulse — Real-Time Formula 1 Data App

2025 · f1pulseapp.vercel.app

- Built and deployed a Formula 1 data web app using AI-assisted development, giving fans access to race telemetry, driver statistics, and circuit analytics.
- Designed a responsive interface for exploring race data, with the source code public on GitHub.

Tech: React, JavaScript, Tailwind CSS, AI, Vercel

Skills

- **Languages:** Python, Bash, JavaScript, PHP, C#
- **Tools & Workflow:** Git, GitHub, Jira, Confluence, Linear, Notion
- **SRE & Infrastructure:** Docker, ArgoCD, GitHub Actions, Vercel, AWS, Kubernetes
- **Observability & Incident Management:** Incident.io, Datadog, Grafana, Betterstack
- **Frameworks:** React, Laravel, Tailwind CSS
- **Automation & AI:** Claude Code, LLM prompt engineering, Robotic Process Automation, Cronicle
- **Certifications:** EF SET English Certificate (C2 Proficient), 2023

Education

Saint Louis University — Bachelor of Science in Information Technology, *2022*
